

What Some Ordinary People Are Doing and Can Do about Global Climate Change, the Energy Shortage, Melting Glaciers, Rising Tempers and the Crises We Face for Sustaining this Planet

These are just a few examples from current and recent grassroots projects:

The Eco Nest “Pod” Project

Putting water purification, alternative energy and power generation, biosensors for health monitoring of people and food, bioprotectants for the home and clothing, internet communication and education, pandemic preparedness, and micro-economic self-starter business opportunities, all together into one 3m² package that can be setup in any village or town.

The Loudermilk Institute for Sustainability

established in 2006 to coordinate and facilitate projects that focus on consumer products and the business processes by which they are made – founded by a pioneer in Eco-Fashion (Linda Loudermilk) - and also the

Water Is A Human Right Initiative

Futures Gateway

Turning learning into a game and bringing kids and families from diverse and conflicting countries and ethnic groups into an online and in-person space to learn about how to compete cooperatively and collaboratively, including the growth of team projects that can lead to sustainable micro-economic ventures.

PlayPump

Turning play and exercise into fresh water where there was none, a vision started by one and now helping to serve the needs of thousands across Africa. This is how entrepreneurial wealth should be spread and shared.

There are hundreds of small and growing SEEDS of Sustainability all over the world. Energy, Water, Health, Transportation, Education – working with and independently of the Major Corporations and Governments. You don't need to have \$millions to start something Big that will itself Grow and Sustain into a real Revolution in Daily Life!
